 San Francisco, CA  (858)-531-7069

EDUCATION

UC San Diego

Masters in Computer Science

Sept '18 - Dec '19

Indian Institute of Technology, Delhi

B. Tech in Computer Science & Engineering

July '14 - May '18

TECHNICAL SKILLS

Programming:

Python, Java, C++, Bash, SQL, Gremlin

Software & Tech:

k8s, Terraform, Docker, Apache Airflow, AWS Neptune Graph DB, Jenkins, Git, AWS, ArgoCD, Kustomize, Helm, Kafka

WORK EXPERIENCE

Embark Trucks, San Francisco CA *Software Engineer*

May 2022 - Present

Python, Kafka, AWS, Terraform, k8s, Docker, SQL, Bash, Apache Airflow, Jenkins, ArgoCD

- Member of the Data Infrastructure team, which owns the entire lifecycle of Embark's 10 PB+ data lake. Includes on-board vehicle data recording, data ingestion, data processing, storage and query systems.
- Designed and implemented a system to enable dependency tracking across DAGs in Apache **Airflow**. This extension of DeferrableOperators linked runs from different DAGs that didn't share execution time.
- Led an effort to allow operators to asynchronously annotate events that happened on road, after trucks completed their runs. Contributed to the **annotations API**, modified processing tasks to be idempotent and set up sandbox testing environment as part of the initiative.
- Implemented a **Kubernetes** based consumer to process messages from **Kafka**, enabling the transition from batch to stream processing for some of our business logic.
- Improved operational maturity of the data offloading and the data processing system by adding meaningful metrics to track service health and creating **Datadog** monitors to alert the team of any performance issues.
- Contributed to an effort to roll out a new CI/CD workflow for numerous systems, leveraging **Jenkins**, **ArgoCD**, **Kustomize** and **Terraform** to ensure that releases were reliably deployed.
- Monitored our data pipelines and responded to any live incidents that may be affecting our SLAs.

Salesforce, San Francisco CA *Member of Technical Staff*

Jan 2020 - May 2022

Python, SQL, Bash, AWS, Terraform, k8s, Docker, Neo4j, Apache Airflow, Spinnaker

- Worked on analysis and reporting infrastructure for the threat and vulnerability management (TVM) org.
- Developed **SQL** and **Python** ETL pipelines which operate on and enrich vulnerability details.
- Improved the team's infrastructure deployment practices by migrating services to **kubernetes** and adopting the Infra as Code paradigm using **Terraform**.
- Worked on migrating team's data store from a relational to a **graph database**.
- Implemented data gating capabilities and established remediation processes to make our ETL pipelines robust to upstream failures.
- Implemented a service to detect logic changes in our vendor tools and suppress their effect in our pipelines. This makes our customers immune to variations in vendor service.

Salesforce, Boston MA *Software Engineering intern*

June 2019 - Sept 2019

Elasticsearch, Kibana, AWS Lambda, Python, Java

- Developed a service to collect system patching related event-based metrics from around 8000 hosts that were then presented on Kibana to provide visibility into the patching.

Rivigo, Gurgaon India *Algorithm Engineer (Data Science)*

June 2018 - Aug 2018

Jupyter, Python, Java, GraphHopper

- Prepared and cleaned the GPS readings from truck trips, to extract data features.
- Trained an **XGBoost ML model**, in **Python**, for predicting ETA of trucks with an RMSE (error) of 8 mins on trips of 200 mins duration.
- Used **Java** based open-source **GraphHopper** engine to create Proof-of-Concept for a route planning engine, that can be customized based on business needs.

Pharmart, India *Cofounder & CTO*

Nov 2015 - May 2018

Java, Python, Android, Django, MySQL, AWS

- Developed the full-stack solution (**Android, Java, Django, Python and MySQL**) for a hyper-local e-commerce platform for purchase and delivery of medicines.
- Led the startup from idea stage to having over 500 paying customers.

Amazon, India *Software intern*

May 2017 - July 2017

Java, Spark, Map Reduce, AWS S3

- Worked with **Apache Map Reduce** and **Apache Spark**, in **Java**, to develop a package to allow customers to read databases from AWS S3.

HACKATHONS (ALL AVAILABLE IN GITHUB)

- **LA Hacks 2019 (Honey Fairness Hack Award)**: Developed an SMS text based chat bot service to allow users to access latest trending news, without internet.
- **UC Health Hacks 2018**: Developed an Android based patient triaging app that can be used while patient is on way to hospital, to allow efficient care once they arrive at the hospital.
- **AI for Education Global Hackweek (1st place)**: Developed a smart document reader on **Android**, to generate questions from the document, in a chat form.

AWARDS

- | | |
|------------------------------------|------|
| • JEE (Advanced) All India Rank 65 | 2014 |
| • KVPY fellowship | 2014 |
